

SPONSORSHIP PACKAGE

MCMASTER ROCKETRY

ABOUT THE TEAM

A **student-run** team providing an opportunity for McMaster students to **design, build, test,** and **launch** rockets with innovative technology while following engineering safety & design principles. We currently have over 100 active members and have **successfully launched and recovered our 6th high-power rocket** at **Launch Canada 2026**. Each year we compete at **Launch Canada**, with goals to achieve flight with our first ever student-developed **hybrid engine** at the 2027 competition.

1ST PLACE

Payload Challenge
2 consecutive years

Launch Canada 2025, 2026

3RD PLACE

Basic Launch

- **Customized promotion** as requested!

LAUNCH CANADA COMPETITION

Launch Canada is Canada's first **major national rocketry competition**. It offers an opportunity for **Canadian rocket teams** to **launch high powered rocketry projects**, as well as **discuss** and **present** their **technical designs**. It is a chance to **connect** with **students** and **professionals** who are **enthusiastic, dynamic,** and **very knowledgeable**.

McMaster Rocketry is a **competitive team** at Launch Canada. In summer 2026, our sixth high-power rocket, Osiris, earned **first place** in the Payload Challenge for the second year in a row, and was our highest and fastest rocket to date.

In summer 2027, McMaster rocketry plans on competing in the Advanced Launch Category for the first time using our student designed hybrid rocket engine in addition to the Payload Challenge.
